Consortium partner profile

Possible contributions to discuss, not a statement of past consortium performance.

Proposition

Peripeteia brings a systems-learning proposition connecting inquiry, responsible action, interaction and institutional understanding. Potential settings include education, sustainability and cross-boundary organisational challenges.

Roles to assess together

Possible roles include educational content and learning design, digital learning infrastructure, facilitation and capacity building, evaluation and learning, consortium participation, or applicant/programme lead where eligibility and capacity are confirmed. No previous performance in these roles is asserted here.

Practical contribution

A jointly scoped work package could include learning activities, facilitated inquiry, reusable prompts, learner artefacts and an agreed evaluation protocol. Establish outputs, acceptance criteria, partner responsibilities and permitted reuse before commitment.

Due diligence required

Confirm legal representation, current register information, eligibility, tax-status documentation where relevant, delivery capacity, finances, safeguarding and data responsibilities. Funding history, consortium references and verified capacity figures have not been supplied for this profile.

A useful first conversation

Bring the call or programme purpose, likely participants, geography, language, timing, intended work package and open questions. No complete project specification is needed to begin exploring fit.
